

ENVIRONMENTAL POLICY

"The environment is an integral part of economic activity and not a free commodity"
M.R. Welford (1995)

Our aim is to operate in a way that minimizes our environmental impact, to act environmentally responsibly and to comply with relevant regulations and legislation.

This environmental policy reaffirms our commitment to minimizing the impact of our operations on the environment and describes the ways in which we will achieve this goal.

We are committed to reducing our environmental impact by continuing to:

1. Ensure that all our processes are designed, implemented and executed in an environmentally friendly manner.
2. Use in all cases, inputs (materials, raw materials, components, etc.) that are compatible with environmental sustainability and the reduction of pollutants (CO₂, VOC, etc.).
3. Procure paper from sources certified for the sustainability of forest areas (FSC Standard for Chain of Custody Certification) and communicate this quality to our customers.
4. Implement an effective system of waste management (waste management) and recycling from the appropriate management structures.
5. Ensure the continuous information and activation of our staff in the adoption of the principles of sustainable environmental management.
6. Constantly evaluate our environmental sustainability and how it can be optimized.
7. Allow access to the information that confirms the application of the aforementioned.

We believe that stakeholders (customers, staff suppliers) will make the right choices for the environment when they have reliable information, training and the right tools. The management at all levels of ELIKON LTD will take care of the communication and implementation of this environmental policy to all and by all stakeholders.

For ELIKON LTD, The Legal Representative
